

My name is Thomas Farinelli, and I hold a Bachelor's degree in Computer Engineering from Roma Tre University. I am currently pursuing a Master's degree in Artificial Intelligence and Machine Learning, a programme that is allowing me to deepen my knowledge of data analysis, programming, and the development of machine learning-based solutions.

My Master's thesis focuses on analysing the correlation between visual impairments and data collected through eye-tracking technologies. This project gives me the opportunity to work on data processing and interpretation, applying statistical methods and artificial intelligence techniques to a practical research context.

Throughout my academic and professional experience, I have gained experience in backend software development, using technologies such as Node.js and Spring Boot, as well as entry-level frontend development skills with Angular, TypeScript, and JavaScript. I also completed a university internship focused on machine learning techniques for the diagnosis of pulmonary diseases, working with different classification algorithms and performance evaluation metrics.

Before starting university, I lived and worked in London for approximately two years. This experience helped me improve my English language skills and develop adaptability, communication, and teamwork abilities in international and multicultural environments.

I am a motivated, reliable person with a strong interest in continuous learning. I would like to pursue a career in Artificial Intelligence and Machine Learning, contributing to the design, development, and evaluation of data-driven solutions and intelligent systems. I am particularly interested in opportunities where I can apply my technical and analytical skills, continue developing my expertise, take on new challenges, and gradually assume greater responsibilities.

Thank you for your time and consideration. I remain available for an interview or any further information.

Kind regards,
Thomas Farinelli
